

# Ankita Khot *Flutter Developer*

ankitakhot012@gmail.com • +91-9096863092 • Kolhapur, Maharashtra -416005

## Work Experience:

Kolhapur	<b>Flutter Developer (1.5 Year experience)</b> <i>Ascensify Technology, Kolhapur</i> <ul style="list-style-type: none"><li>Developing cross-platform mobile application using Flutter &amp; Dart.</li><li>Collaborating with the development team for UI implementation and state management.</li><li>Working on API integration, responsive layouts, and Firebase services.</li><li>Following clean architecture and best practices in Flutter app development.</li></ul>
----------	---

## Education:

2025	<b>Master of Computer Applications (MCA)</b> <i>DY Patil Agriculture &amp; Technical University, Talsande, Kolhapur</i>
------	--

## Technical Skills:

<b>Languages</b> Dart	<b>Frameworks/Tools</b> Flutter, Firebase, Git, Rest APIs
<b>Database</b> Firebase Firestore.	<b>Others</b> GitHub, VS Code, Android Studio

## Projects:

<b>Yucca Application</b> <i>Yucca - Order Management &amp; Verification App</i> <ul style="list-style-type: none"><li>Built a location-verified order management system enabling employees and distributors to place structured orders.</li><li>Orders are authenticated via in-store photos and GPS data. Key features include dual-role logins (Employee &amp; Distributor), real-time order tracking, PDF invoice generation, and an admin panel for user management and product updates.</li><li>Ensures order accuracy and streamlines fulfillment through verified digital workflows.</li></ul>
<b>Om Swaroop Oil</b> <i>Salesman Tracking &amp; Order Authentication System</i> <ul style="list-style-type: none"><li>Developed a role-based tracking and authentication system to assign daily party visits to salesmen and validate coupon collection through live GPS tracking. Integrated features include barcode scanning, presence marking, advance payment requests, and automated distance-based payout calculation. Ensures data integrity with historical record-keeping and real-time location validation for enhanced transparency and accountability.</li></ul>
<b>BNI Web Application (Flutter Web)</b> <i>A business-related data management platform built using Flutter Web with role-based access control. The application supports three user roles: User, Admin, and Super Admin.</i> <ul style="list-style-type: none"><li>User: Users can register, send WhatsApp messages, add referrals, and track the number of referrals associated with each person.</li><li>Admin: Admins have the ability to create and manage Conclaves, assign Supervisors to specific Conclaves, edit user data, upload and download Excel files, and add rounds.</li><li>Supervisor: Supervisors can edit user data, upload and download Excel files, and add rounds within their assigned Conclaves.</li></ul>
